

Year End Note

2025-26

Dear Investors,

Looking ahead to 2026, we would like to take this opportunity to reflect on the evolving global and domestic macro environment, review the performance of Indian equity markets, outline key portfolio actions undertaken during the year, and share our outlook and positioning for the year ahead.

After a very strong previous 4 years, the leadership firmly shifted to the Large caps with Mid and Small caps underperforming.

In CY25, returns (TRI) across Market-cap segments were as below:

Nifty 50	Nifty Midcap 150	Nifty Smallcap 250
11.4%	5.5%	-6.3%

Past performance may or may not be sustained in future. Please consult your financial advisor before investing.

Despite the correction, the Mid and Small cap segments of the market continue to trade at demanding valuations relative to their own history as well the Large cap peers. In terms of sector performance, export heavy sector like IT and Healthcare underperformed where as sectors catering to the domestic economy such as Metals, Auto and Financial Services outperformed.

Sector Returns - CY25 (%)

Global Backdrop: Heightened Uncertainty, Persistent Fragilities

The global environment through CY2025 remained challenging and unusually uncertain, shaped by a confluence of geopolitical and policy-driven risks:

- **US trade policy uncertainty** resurfaced as tariffs increasingly became tools of negotiation rather than instruments of long-term economic strategy, contributing to volatility in global trade flows and capital markets.
- **Geopolitical tensions in the Middle East** continued to pose risks to energy markets and global supply chains.
- **India–Pakistan tensions**, following the horrific terrorist attacks in Pahalgam and the subsequent skirmish in May, added a regional risk premium to Indian assets, albeit temporarily.
- **The ongoing Russia–Ukraine conflict** remained unresolved, prolonging disruptions in global commodities, energy markets, and geopolitical alignments.

Against this backdrop, risk appetite for emerging markets remained episodic and highly sensitive to global liquidity conditions.

Indian Equity Markets in CY2025: A Year of Divergence

Indian equity markets experienced a year of consolidation and relative underperformance, particularly when viewed against select emerging and developed markets.

Key themes that defined market performance included:

- **Moderation in credit growth**, which in turn weighed on consumption, especially discretionary spending.
- **Valuation concerns**, particularly in mid- and small-cap segments, led to India trailing several EM and DM peers on a relative basis.
- **Artificial Intelligence** as a market driver became increasingly dominant globally. The lack of listed, scalable AI-native beneficiaries in India, combined with concerns that AI could structurally disrupt traditional IT services, dampened investor sentiment toward the Indian IT sector and, by extension, the broader market.
- **Failure to conclude key trade agreements** further exacerbated foreign equity outflows during parts of the year.
- **Large FDI repatriations via marquee IPOs** such as Hyundai, ICICI Prudential AMC, and LG Electronics led to sustained equity supply and incremental pressure on the Indian Rupee.
- Toward the latter part of the year, large-cap stocks staged a strong recovery, hitting new highs, while **mid- and small-cap indices continued to lag**, constrained by still-elevated valuations.

Fund Positioning: Balanced, Valuation-Aware, and Large-Cap Oriented

Our portfolio positioning reflects a balance between cyclical opportunities and long-duration structural themes, while remaining disciplined on valuation and increasingly biased toward large-cap businesses with superior earnings visibility.

- **Financials:** We continue to selectively increase exposure to segments benefiting from India's deepening financialisation. This includes life insurance and asset management, where long-term penetration remains low and industry structure favours scaled, well-capitalised players with strong distribution. Improving product mix, rising equity participation by households, and steady regulatory support underpin our conviction in this space.
- **Consumer Platforms:** Within consumption, we are reallocating capital toward platform-led models that benefit from structural shifts in consumer behaviour. This includes exposure to digital consumption ecosystems where scale, data advantages, and optionality across adjacencies offer long runway growth. At the same time, we remain cautious on traditional consumer incumbents where quick commerce and changing distribution dynamics are structurally compressing margins and moats. Our consumer exposure is therefore increasingly selective and skewed toward underpenetrated categories with clear volume-led growth rather than pricing power alone.
- **Healthcare:** Structural Growth with Selective Innovation Healthcare remains a core structural allocation. We are incrementally adding exposure to specialised healthcare delivery and pharmaceuticals where demographic tailwinds, rising healthcare intensity, and expanding therapeutic breadth support sustained earnings growth. Within pharma, we favour companies moving beyond legacy therapy concentration into emerging segments with higher growth optionality. In hospitals, we prefer differentiated platforms with strong clinical depth and expansion into high-growth niches.
- **Infrastructure, Power, and Electrification Themes:** We maintain conviction in power generation, transmission, and related infrastructure. As electricity demand continues to compound and the generation mix evolves, peak power deficits are likely to re-emerge, necessitating sustained investments across the grid. Allied to this, we see structural opportunity in electrical equipment and cables, supported by power capex, urban real estate recovery, and rapid data centre build-out.
- **Industrials, Metals, and Domestic Capex:** Our exposure to metals and industrials is anchored in India's urbanisation and manufacturing push. Demand visibility remains healthy, supported by favourable input cost dynamics, policy safeguards, and infrastructure spending. We remain selective, focusing on balance sheet strength and cost competitiveness.
- **Energy and Autos: Cyclical Upside with Discipline:** Oil Marketing Companies continue to benefit from benign crude prices and a relatively stable pricing regime. In automobiles, multiple cyclical tailwinds—potential GST rationalisation, improving credit growth, a gradual recovery in urban discretionary demand, and prospective central government wage revisions—support a more constructive outlook.
- **Asset Allocation and Risk Management:** Across the portfolio, we retain a clear tilt toward large caps where valuation comfort has improved and earnings durability remains superior. Within the Multi-Asset Fund, we have gradually reduced exposure to gold and silver, as recent price action increasingly resembles late-stage commodity behaviour, notwithstanding supportive long-term fundamentals.

Overall, portfolio changes during the period reflect a bottom-up reallocation toward sectors where structural growth, improving industry economics, and valuation discipline intersect, while trimming exposures where competitive intensity or late-cycle dynamics are rising.

Outlook for CY2026: Cautious Optimism with Selective Opportunities

Looking ahead, several macro and micro factors will shape market outcomes in CY2026:

Policy Tailwinds

- **Fiscal initiatives** such as income tax rationalization, potential GST cuts, continued infrastructure capex, and structural reforms including the Nuclear Bill and labour code reforms are expected to accelerate growth.
- **Monetary support** through potential CRR cuts, repo rate reductions, and easing of risk weights to spur credit growth even as asset quality for lenders is the best it has been for over a decade.

Economic and Market Dynamics

- Equity markets, especially **Mid and Small caps continue to trade at demanding multiples** versus historical averages, while earnings estimates have only recently begun to stabilize after six consecutive quarters of downgrades.
- **Early indicators of a below-average** monsoon warrant close monitoring.
- **Urban consumption recovery** is expected as credit growth picks up again and wage growth begins to catch up with post-COVID rental and cost-of-living inflation.
- **Private sector capex** is likely to accelerate, supported by strong corporate balance sheets.
- Even as private sector capex picks up, the central government is likely to **significantly slowdown its pace of fiscal deficit reduction** resulting in a further tailwind for sustained growth momentum.
- We expect a **gradual uptick in EPS growth**, reversing the prolonged downgrade cycle.

Closing Thoughts

As India steadily progresses toward becoming the world's third-largest economy, it remains one of the few global markets offering the combination of scale, growth, entrepreneurship, and improving institutional depth necessary for sustained long-term wealth creation.

For the patient, long-term investor, we remain confident that disciplined, valuation-aware investing in high-quality Indian businesses will continue to deliver attractive outcomes over time.

We thank you for your continued trust and partnership.

Warm regards,
Shriram AMC
